

Java

```
class Solution {  
    public int[] occurrencesOfElement(int[] nums, int[] queries, int x) {  
  
    }  
}
```

JavaScript

```
/**  
 * @param {number[]} nums  
 * @param {number[]} queries  
 * @param {number} x  
 * @return {number[]}  
 */  
var occurrencesOfElement = function(nums, queries, x) {  
  
};
```

TypeScript

```
function occurrencesOfElement(nums: number[], queries: number[], x: number): number[] {  
  
};
```

C++

```
class Solution {
public:
    vector<int> occurrencesOfElement(vector<int>& nums, vector<int>& queries, int x) {

    }
};
```

C#

```
public class Solution {
    public int[] OccurrencesOfElement(int[] nums, int[] queries, int x) {

    }
}
```

Kotlin

```
class Solution {
    fun occurrencesOfElement(nums: IntArray, queries: IntArray, x: Int): IntArray {

    }
}
```

Go

```
func occurrencesOfElement(nums []int, queries []int, x int) []int {

}
```
